

## Graphs

Is  $V(2)$  &  $V(5)$  are not connected because  
 $V(2)$  root is  $V(0)$   
&&  
 $V(5)$  root is  $V(4)$

Is  $V(3)$  &  $V(2)$  are connected because  $V(2)$  &  $V(3)$  share the common root  $V(0)$

How do we check, does the vertices are connected or not ?

Answer is make use of DisJointSet

Returns the root of a given vertex.

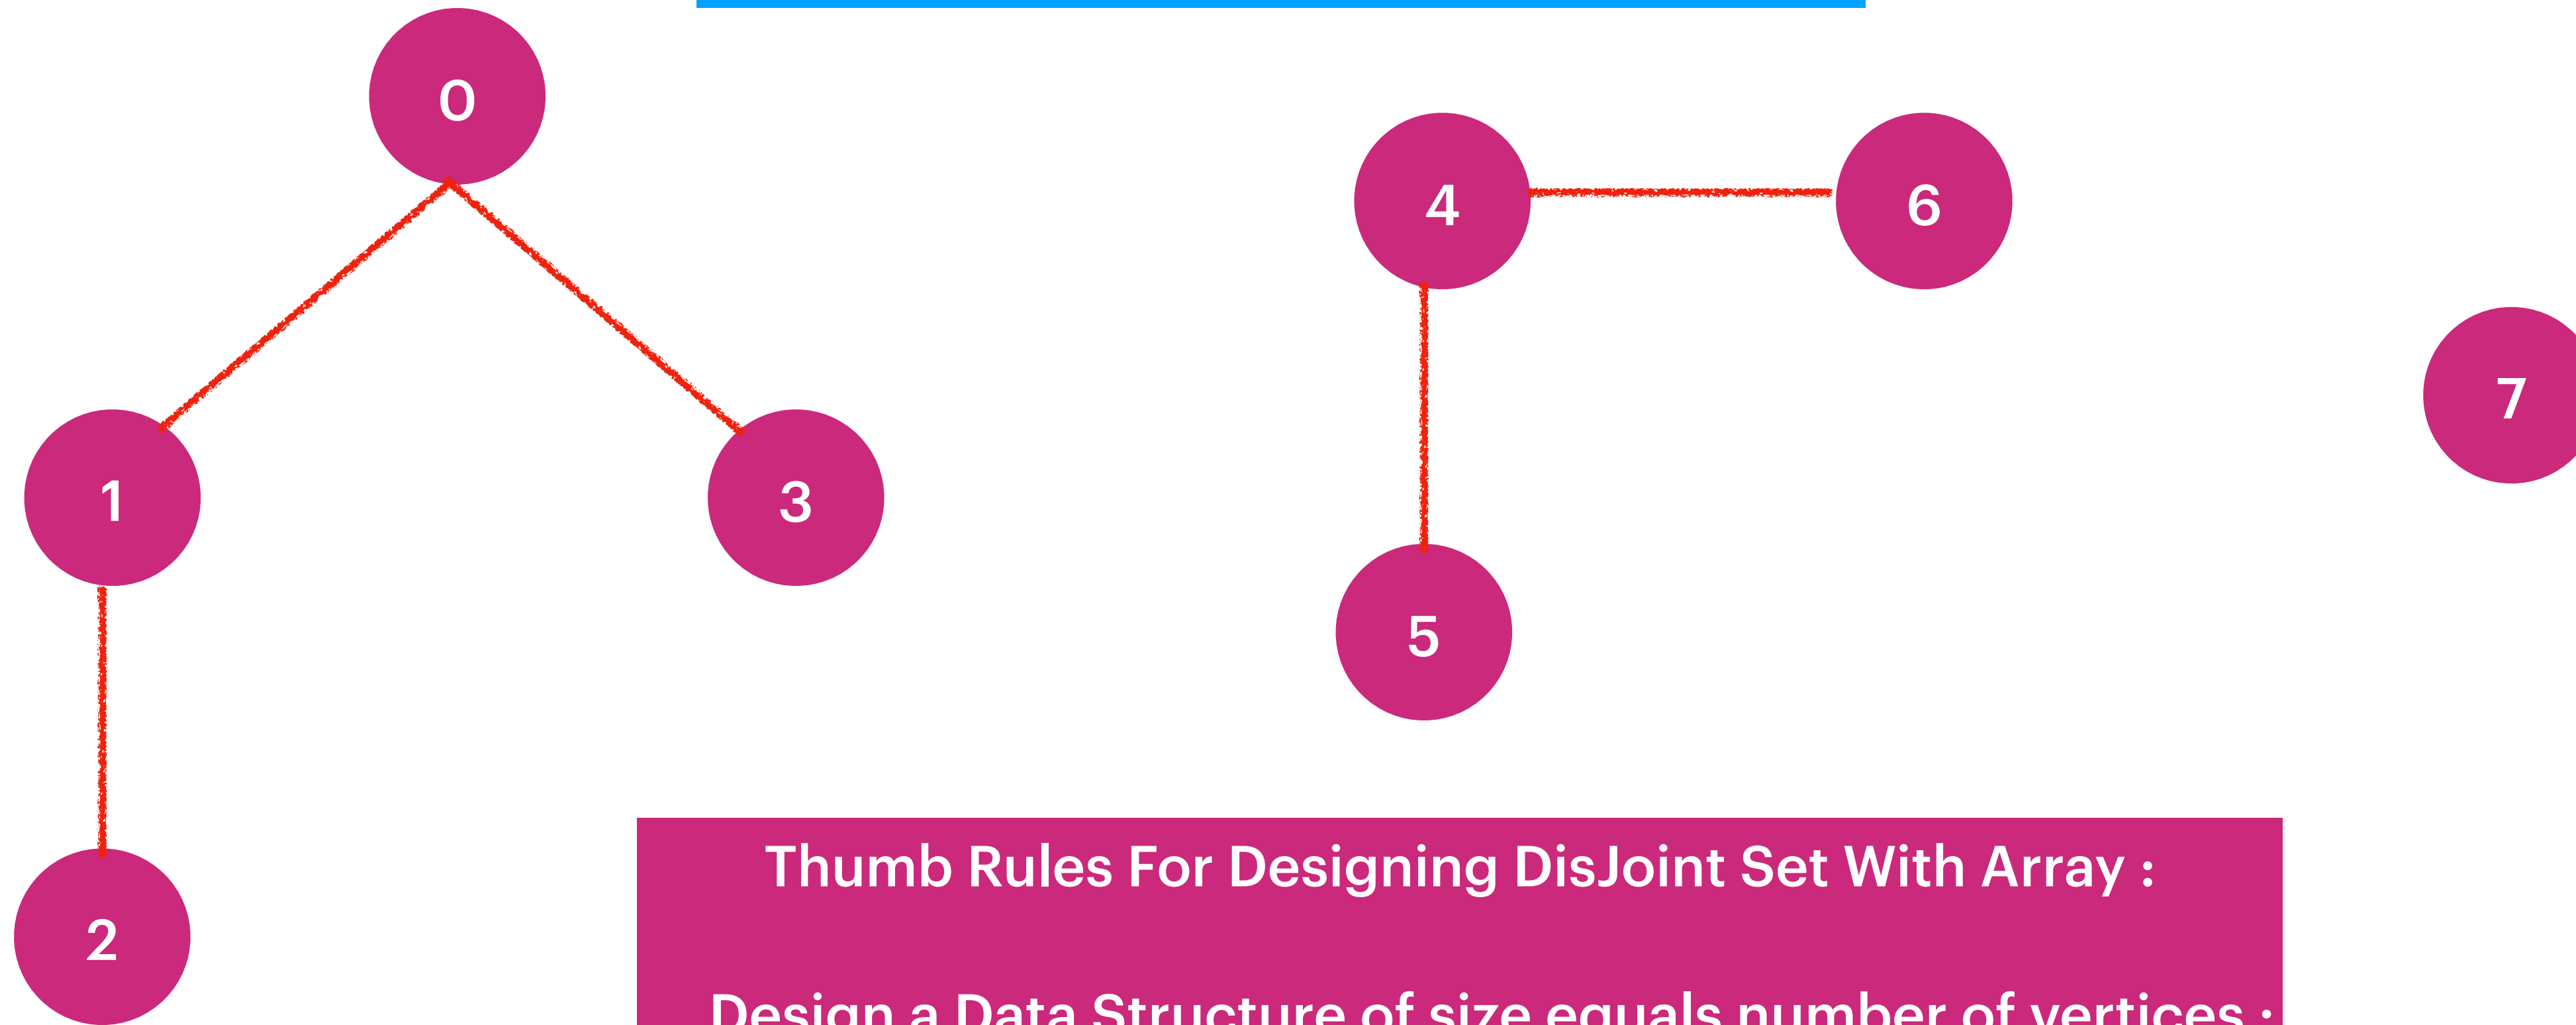

`find(v)`

Makes a connection between vertices

`union(vx, vy) :`

Construct DisJoint Set for the below Graphs

Case 1: Design DisJoint Set with QuickFind.

Thumb Rules For Designing DisJoint Set With Array :

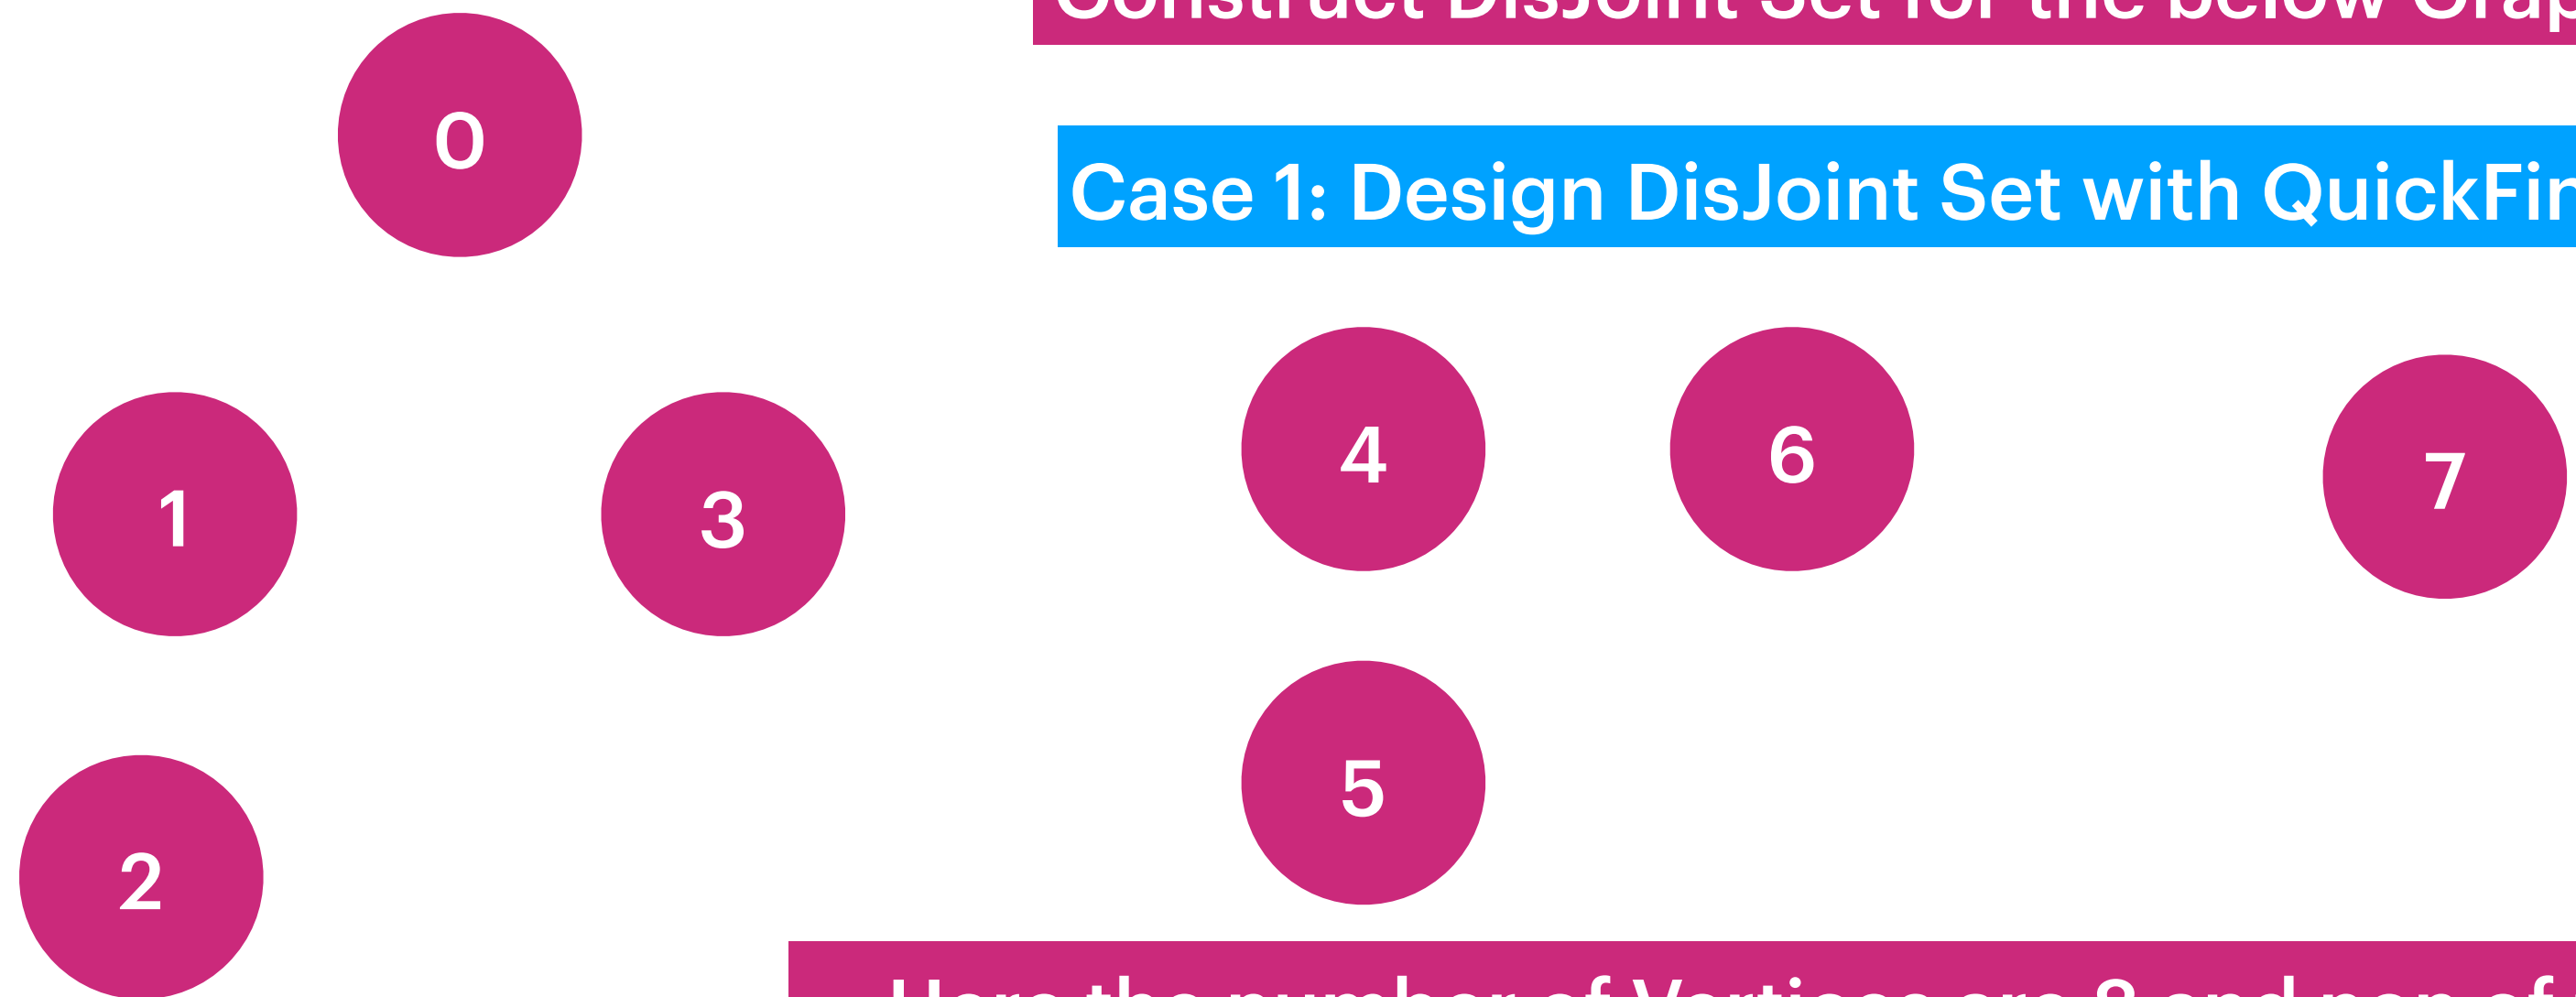

Design a Data Structure of size equals number of vertices :

Form Independent connections.

Ex: (0,1) (0,3) (1,2) (4,5) (4,6) , (7,7)

Construct DisJoint Set for the below Graphs

Case 1: Design DisJoint Set with QuickFind.

Here the number of Vertices are 8 and non of them are connected.  
We know that every individual vertex can act as root to ItSelf.

|                   |   |   |   |   |   |   |   |   |
|-------------------|---|---|---|---|---|---|---|---|
| root              | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| Index's/ Vertices | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |

Array Index can be represented as Vertex.  
Index value can be represented by root.

Construct DisJoint Set for the below Graphs

Case 1: Design DisJoint Set with QuickFind.

```
public void find(int v)
{
    return root[v];
}
```

| root[]            | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
|-------------------|---|---|---|---|---|---|---|---|
| Index's/ Vertices | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |

↓

| root              | 0 | 0 | 2 | 3 | 4 | 5 | 6 | 7 |
|-------------------|---|---|---|---|---|---|---|---|
| Index's/ Vertices | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |

Construct DisJoint Set for the below Graphs

Case 1: Design DisJoint Set with QuickFind.

```
public void find(int v)
{
    return root[v];
}
```

Time Complexity :  $O(1)$

|                   |   |   |   |   |   |   |   |   |
|-------------------|---|---|---|---|---|---|---|---|
| root              | 0 | 0 | 2 | 3 | 4 | 5 | 6 | 7 |
| Index's/ Vertices | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |

|                   |   |   |   |   |   |   |   |   |
|-------------------|---|---|---|---|---|---|---|---|
| root              | 0 | 0 | 2 | 0 | 4 | 5 | 6 | 7 |
| Index's/ Vertices | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |

# Construct DisJoint Set for the below Graphs

## Case 1: Design DisJoint Set with QuickFind.

|                   |   |   |   |   |   |   |   |   |
|-------------------|---|---|---|---|---|---|---|---|
| root              | 0 | 0 | 2 | 0 | 4 | 5 | 6 | 7 |

# Construct DisJoint Set for the below Graphs

## Case 1: Design DisJoint Set with QuickFind.

$\text{root}[4] = 4$   
 $\text{root}[5] = 5$

|                   |   |   |   |   |   |   |   |   |
|-------------------|---|---|---|---|---|---|---|---|
| root              | 0 | 0 | 2 | 0 | 4 | 5 | 6 | 7 |
| Index's/ Vertices | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |

|                   |   |   |   |   |   |   |   |   |
|-------------------|---|---|---|---|---|---|---|---|
| root              | 0 | 0 | 0 | 0 | 4 | 4 | 6 | 7 |
| Index's/ Vertices | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |

# Construct DisJoint Set for the below Graphs

## Case 1: Design DisJoint Set with QuickFind.

$\text{root}[4] = 4$   
 $\text{root}[6] = 6$

|                   |   |   |   |   |   |   |   |   |
|-------------------|---|---|---|---|---|---|---|---|
| root              | 0 | 0 | 2 | 0 | 4 | 4 | 6 | 7 |
| Index's/ Vertices | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |

|                   |   |   |   |   |   |   |   |   |
|-------------------|---|---|---|---|---|---|---|---|
| root              | 0 | 0 | 0 | 0 | 4 | 4 | 4 | 7 |
| Index's/ Vertices | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |

## Case 1: Design DisJoint Set with QuickFind.

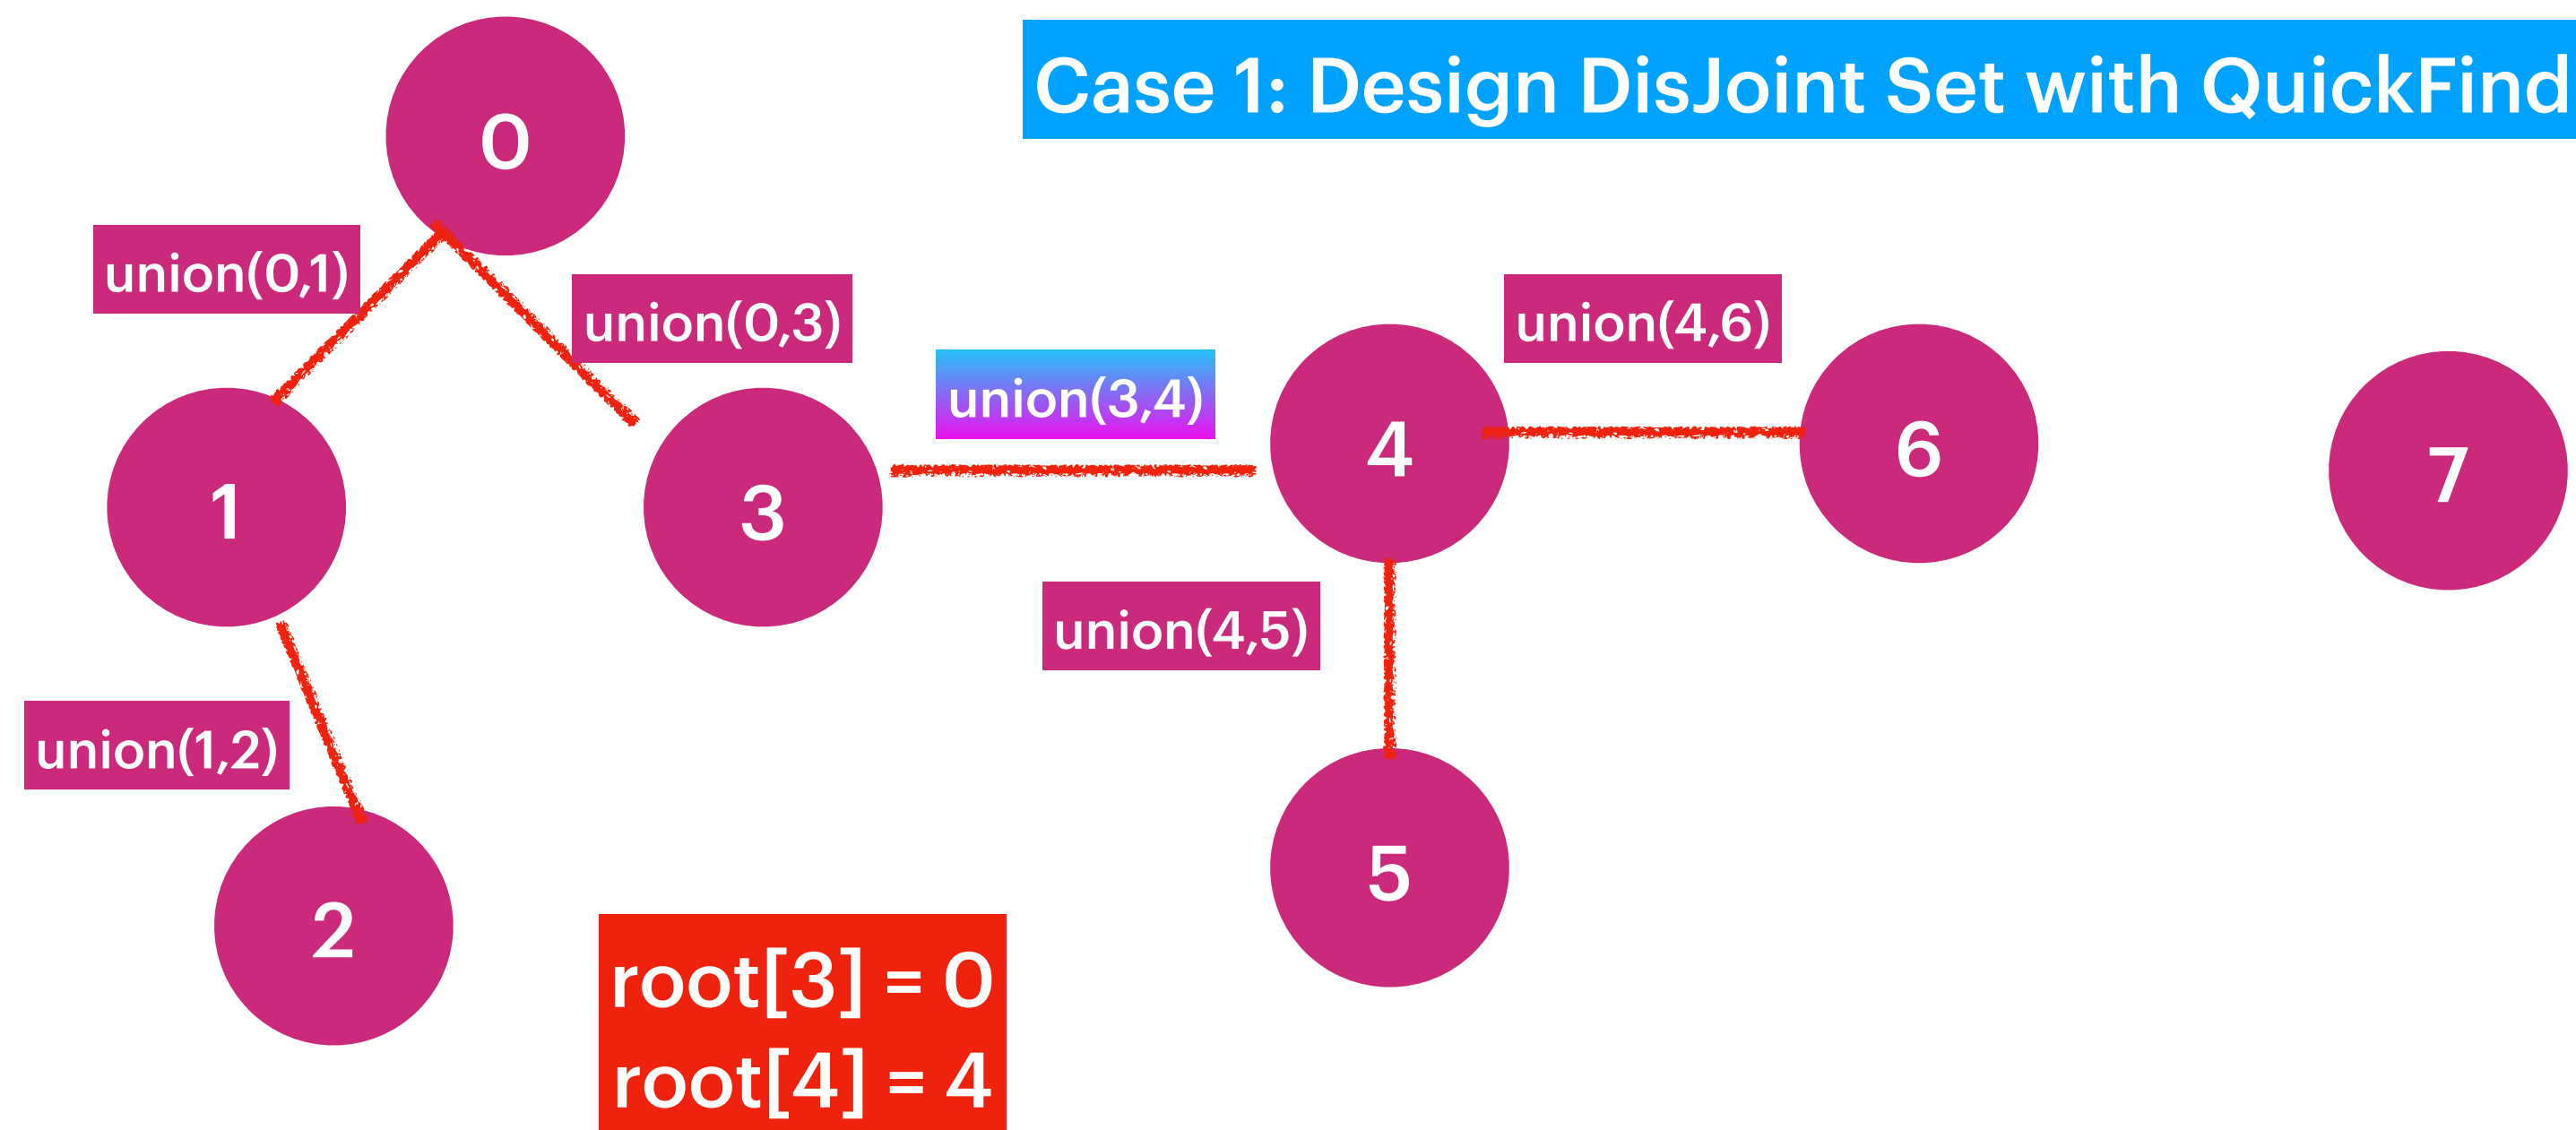

| root              | 0 | 0 | 0 | 0 | 4 | 4 | 4 | 7 |
|-------------------|---|---|---|---|---|---|---|---|
| Index's/ Vertices | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |

V(2) & V(3) connected.  $\rightarrow$  True ( `root[2] == root[3]` )

V(2) & V(5) are connected.  $\rightarrow$  False ( `root[2] != root[5]` )

Case 1: Design DisJoint Set with QuickFind.

```
public void union(int vx, int vy)
{
    int rootX = find(vx);
    int rootY = find(vy);
    If(rootX != rootY)
    {
        root[vy] = rootX;
        for(int v = 0 ; v < n ; v++)
        {
            if(root[v] == rootY)
            {
                root[v] = rootX;
            }
        }
    }
}
```

|                   |   |   |   |   |   |   |   |   |
|-------------------|---|---|---|---|---|---|---|---|
| root              | 0 | 0 | 0 | 0 | 4 | 4 | 4 | 7 |
| Index's/ Vertices | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |

Time Complexity : O(n)

|                   |   |   |   |   |   |   |   |   |
|-------------------|---|---|---|---|---|---|---|---|
| root              | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 7 |
| Index's/ Vertices | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |

V(2) & V(6) connected. —> True ( root[2] == root[6] )
